MINIMALLY INVASIVE DENTISTRY

Dear patients,

With our region being in the orange zone, we felt it important to assure you that we are doing the utmost in disinfection of our offices since we have reopened. The following are the additional protocols we have instituted since our reopening in June.

- Mandatory COVID-19 health screening questions before every visit
- Use of extra-oral suction units in every room to evacuate aerosols
- Use of UVC light sanitation
- Use of no-touch forehead thermometers
- HEPA air filters throughout the building
- Additional PPE: N95 masks, face shields, surgical caps and gowns
- Hourly wipe downs of waiting room area and patient restrooms
- 30-second pre-rinse rinse before treatment to reduce virus if present in saliva
- Use of sanitizing foggers to disinfect at the end of each day
- Disinfecting of every surface and space after each patient and at the end of every day

We will continue to work diligently to provide you with the same service as always while following all of the above protocols and those recommended by the CDC and the NYSDOH. We want you to feel assured that you are safe when visiting our offices during this time. Thank you for your continued trust and confidence in us.

Sincerely,

The Doctors & Staff of The Buffalo Dental Group
